Information for patients

Advice on how to wash soiled personal clothing

Infection Control

There is a patient's property bag containing soiled clothing in the locker of the patient named below:

Patient:

Ward:

Ward contact number:

Please read this leaflet before leaving with the laundry and check with a member of staff if you are unclear as what to do.

We do not wash patients' personal clothing in hospital. If your own clothing becomes soiled, your clothes will be sealed in a special pink dissolvable bag.

This pink bag will then be placed into a white plastic 'patient's property' bag and stored in your locker.

How to wash soiled clothing using a washing machine

- Take the pink bag out of the white 'patient's property' bag.
- Place the pink bag into the washing machine. Do not open the pink bag as it has been specially designed to go straight into the washing machine. Do not add any other items of clothing into the washing machine.
- You should always wash your hands thoroughly after handling soiled clothing, or the bag of soiled clothing.
- Use a biological powder, liquid or tablets if possible.
- Use a pre-wash cycle before the main wash cycle.
- Wash the items at at least 60°C so that the pink bag dissolves and releases the clothing into the washing machine (washing at a lower temperature may not dissolve the bag, which may result in the parts of the back sticking to the clothing).
- When the washing cycle is complete, remove the washing from the washing machine and dry the clothing naturally or in a tumble dryer.
